

JIMMY TAMBURRINI

Harrison Township, MI | Jimtamburrini@gmail.com | 586-839-2258 | [LinkedIn: Jimtamburrini](#)

PROFESSIONAL SUMMARY

Detail oriented mechanical engineering junior with minors in business and entrepreneurship innovation. Offers hands on engineering experience in automotive manufacturing, with a strong interest in technical problem solving, process improvement, and business strategy.

EDUCATION

Michigan State University, College of Engineering- East Lansing
Bachelor of Science, Mechanical Engineering
Minors: Business | Entrepreneurship & Innovation

3.45/4.00 GPA
August 2024 - May 2028

WORK EXPERIENCE

MacLean-Fogg Component Solutions- Chesterfield, MI

Engineering Intern

May 2026 - August 2026

- Supported application engineering projects for automotive fastener products by reviewing customer requirements, part drawings, and application needs to help identify manufacturable fastening solutions
- Created a comprehensive Excel feature matrix and validated SolidWorks-based mylar overlay for multiple fastener sizes, translating design-standard dimensional and geometric tolerances into an optical-comparator inspection tool that allows quality and engineering teams to identify and fix dimensional and application errors in current rolling die tooling.
- Developed and improved VBA-based automation tools for CAD part generation and drawing creation, reducing repetitive design tasks and improving consistency across fastener models and technical documentation

MacLean-Fogg Component Solutions- Chesterfield, MI

Continuous Improvement Engineering Intern

May 2025 - August 2025

- Constructed and deployed industrial automation systems, increasing efficiency and reducing downtime across 3 collective teams in the company
- Initiated development of training materials for continuous improvement initiatives, resulting in greater employee engagement across 3 departments and fostering a more collaborative team culture
- Evaluated existing processes using value stream mapping, identifying opportunities for cost reduction and efficiency gains

PROJECTS

Optical Comparator Design Overlay Standard

- Analyzed multiple data sources to identify consistencies and discrepancies across revisions, establishing reliable values for fastener dimension standardization.
- Organized specification limits into a structured Excel matrix and created SolidWorks overlay geometries representing the acceptable tolerance boundaries and validated the overlay for use on an optical comparator and prepared a handoff guide explaining the inspection process and future application of the tool

Automated Part and Drawing Generation Software

- Designed and implemented a user-friendly dashboard that automates the creation of SolidWorks part models and engineering drawings based on defined inputs reducing repetitive design tasks
- Integrated existing CAD templates and company drawing standards to generate multiple unique model configurations with predefined drawing views and title block information streamlining the drawing creation

CERTIFICATIONS

- Lean Six Sigma White Belt Certification - The Council for Six Sigma Certification (CSSC)
- Power BI Data Analytics - National Association of State Boards Accountancy (NASBA)
- Excel: Macros, VBA code, and Python in Excel - LinkedIn learning

INVOLVEMENT

- Chassis Design Lead - Michigan State University BAJA Racing Team
- ASME - American Society of Mechanical Engineers
- Engineering Society of Detroit - MSU Chapter

TECHNICAL SKILLS

- Siemens NX CAD
- SolidWorks CAD
- Microsoft Excel, VBA and Macro Code
- Industrial Manufacturing Automation
- Lean Manufacturing, Value Stream Mapping

EXCESS BELOW HERE:

- RCR-CITI for Undergraduates 1 – Pathway to Research MSU

Machine Downtime KPI Process

- Developed an Excel-based database to collect and calculate key performance indicators (KPI) related to machine downtime. Integrated data with Power BI to visualize trends and enable leadership to monitor equipment efficiency and identify areas for improvement
